

WRITTEN REPORT

My analysis revealed that the total number of unique schools is 15. It also showed that the total number of students is 39170. In addition, my analysis concluded that the average reading score of 81.9 is higher than the average math score which is 78.99. Also, my calculations showed that the percentage of students who passed reading was 85.8% while the percentage of students that passed math and reading was a predictable lower percentage of 65.2.

A conclusion I can draw from calculations is that Bailey High School has the highest school budget and per capita spending while Wright High School has the lowest. Another conclusion I settled on was that Bryan Miranda had the highest average test score of 94 in comparison to other students. In addition, my analysis helped me come to the conclusion that Cabrera High School has the highest passing rate while Griffin High School has the lowest number of students.
